

# Qrawler

**Streamline your data management**

# We give you a complete overview of the company you are going into business with

Qrawler collects and indexes data from more sources than any other service. We provide a complete overview of relevant individuals in leading positions, and their respective involvement in other companies, e.g. with partners and agents as well as private networks and relationships that are difficult to map. **Fast and always updated screening identifies potential risk objects.**

# Qrawler's DD screening goes deeper, is more comprehensive and automates large parts of the information collection process

- More comprehensive search and indexing than other services
- Faster identification of potential risks
- Approval of risk-free objects allows for more efficient search and cost savings
- Identify correlations between different sources (external and internal)
- Increased quality of risk assessments
- More efficient sales cycle (faster focus on relevant objects)

# Qrawler aggregates both internal and external data across the whole web to identify correlations and assess risks

Surface Web

Deep Web

Dark web

## The result

- Full overview of all available data in one view
- Verification of company identity, owners, board members, key individuals, addresses, corporate identity numbers, etc.
- Screening of persons of interest regarding their interests or involvement in other companies & organizations, and their connections to other key individuals
- In-depth analysis by searching non-public sources and social networks
- Occurrences in the media and in sanctions or blacklists
- Comprehensive overview of both organisations and people with a higher probability of corruption / sanction
- High frequency screening can be done on the current selection for further risk reduction

# Fast and comprehensive risk identification increase sales efficiency with focus on safe and profitable corporate transactions

**1** Single search interface

**2** Extensive search, market specific

**3** Clear visualisation

- Qrawler Search collects and indexes data in internal systems, as well as systems with shared file areas (Dropbox, Sharepoint, Box, etc.) based on user access.
- Qrawler Search also collects any type of external data (search engines, social media, media, etc) to identify correlations and risks.
